RESEARCH INTEREST

My research interest lies broadly in the intersection of software engineering and machine learning. I am interested in developing intelligent analysis, testing, verification, and synthesis techniques to improve the reliability, robustness, and performance of software systems, especially for machine learning systems.

Currently, I focus on testing machine learning libraries, which serve as the foundation for building, training, and deploying deep learning models. My previous work has helped to find **275** real-world bugs in popular open-source deep learning libraries including PyTorch, TensorFlow, JAX, and OneFlow.
